

Quality Engineer (m/f)

Pie Aeronefs is looking for a motivated Quality Engineer to join our team and help us create the next generation of aircraft. We are a small, dynamic team focused on the rapid development and construction of aircraft prototypes.

Role and Responsibilities

Your primary role is the implementation and maintenance of our quality system, as per EN 9100 Standard, in the context of low-volume composite manufacturing. Your responsibilities are as follows:

- Document, implement and manage the Quality Management System, in collaboration with our engineering, workshop and IT teams
- Put in place, operate, and track an employee training program
- Schedule internal and external audits and respond to findings
- Launch investigations of non-adherence to the quality standard
- Revise the quality standard as required to both ensure product quality and reduce unnecessary tasks
- Perform root-cause analysis of deviations and non-compliance
- Manage the inspection and validation of products
- Perform other tasks as required

Qualifications

- BSc. in Mechanical Engineering, Materials Science, or other related domain
- At least 3 years engineering experience in a manufacturing or prototyping context
- Experience with composite manufacturing methods is strongly preferred
- Experience working with ISO 9001 and/or AN 9100 standards
- B2 or better in both French and English

Contract Conditions

Start : Immediate

Contract : Full time indefinite

Location : La Sarraz, Switzerland

Languages : Engineering operations are conducted in english, but an understanding of french is required to discuss with the production group.

Please send your CV and a motivation letter to jobs@pieaeronefs.ch
